JOIN US FOR GUAT'S NEXT

High mountain ranges, active volcanoes, large crater lakes, the Atlantic and Pacific oceans, different soil types, and consistent rainfall patterns combine to create more than 300 microclimates in Guatemala.

This natural richness is a paradise for coffee production, and it is one of the most important keys to the marked regional differences that make Guatemalan Coffees truly unique.

The wide variety of microclimates leads to a special complexity that results in distinct cup profiles.
